

# Seat Belts

## **Click the seatbelts **BEFORE** turning on the ignition!**

Seat belts are designed for several safety factors in a collision:

- Help the driver to maintain control of the vehicle
- Decrease the chances of the driver and passengers from striking the windshield, dashboard or other fixed objects
- Distribute the force of the impact across the strongest part of the body to minimize injury
- Help prevent the driver and passengers from being ejected.

Even a good driver cannot control another driver's mistakes.

Use the seatbelts. It's the law.
